Art Unit: 2613

DETAILED ACTION

Response to Election/Restriction

1. Applicants' election without traverse of Species I, corresponding to Figure 3, claims 1-3, 6-8, and 16-18 as filed on 7/23/2004 have been acknowledged.

Furthermore, Applicants have withdrawn claims 4-5, 9-15, and 19-58. The requirement is deemed proper and is therefore made FINAL.

Double Patenting

2. The nonstatutory-double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-3, 6-8, and 16-18 are rejected under the judicially created doctrine of double patenting over claims 1-3 and 6-8 of U. S. Patent No. 6,698,021 B1 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

Art Unit: 2613

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows:

Claims 1-3, 6-8, and 16-18, as recited in patented claims 1-3 and 6-8, recite all. Therefore, the claims 1-3, 6-8, and 16-18 have been rejected in view of double patenting.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application, which matured into a pat ent. See *In re Schneller*, 397 F.2d 350, 158 USPQ-210 (GCPA-1968). See also MPEP § 804.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-3, 6-8, and 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barraclough et al (6,226,031 B1).

Regarding claims 1-3, 16, and 17, Barraclough et al discloses a video surveillance and monitoring system, comprising:

a private network (Fig. 2; between 230 and 220) for enabling communication with surveillance cameras, wherein at least two cameras (240, 242) correspond to geographically distinct sites (col. 7, lines 46-53), and

a centralized off-site control site including at least one server (230) being coupled to the private network and to a public network (Fig. 2; between 226 and 230), the server being operative to initialize communication between the cameras and at least one off-site client workstation (214) coupled to the public network, to coordinate the retrieval of

Art Unit: 2613

video images from the cameras to produce retrieved video images to the at least one client workstation (214a), and to archive the retrieved video images in the <u>server</u> for subsequent production to at least one client workstation coupled to the public network, wherein the client workstation cannot initialize communication with the surveillance cameras (col. 6, lines 49-67).

Furthermore, Barraclough et al discloses off-site image database (246) archiving the retrieved video images, and sending live video images to a remote unit (client workstation) for display (col. 8, lines 59-65).

Therefore, it would have been obvious to a person of ordinary skill in the relevant art employing a video surveillance and monitoring system as taught by Barraclough et al to easily re-locate the off-site image database to be included in the centralized off-site control site so as to save recorded image data sets to an already considered safe control site.

Regarding claim 6, Barraclough et al discloses public Internet network (col. 6, lines 49-61).

Regarding claims 7-8 and 18, Barraclough et al discloses sending live images to a remote unit for display (col. 8, lines 59-65).

Furthermore, the Examiner takes official notice that it is conventionally well known for an image server to repeatedly store live video image data to a file or a temporally file that is retrievable by a client workstation.

Conclusion

- 6. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.
 - A) Ozaki et al (6,239,833 B1), Remote image monitoring method and system, and recording medium used for executing image monitoring.
 - B) Vaios (6,271,75 B1), Intelligent multi-access system.

Art Unit: 2613
